rharish0909@gmail.com ◇ Linkedin ◇ Github

OBJECTIVE

AWS Certified Cloud Practitioner and a final year Computer Science student with a strong foundation in cloud technologies and hands-on experience through academic projects and certifications. Passionate about building scalable, efficient systems and contributing to innovative cloud-based solutions.

EDUCATION

12th 2022
Percentage : 80%

Vellore Institute of Technology, AP
B.Tech in Computer Science and Business Systems 2026
CGPA : 9.01

SKILLS

- **Cloud & DevOps:** Kubernetes, Helm, Terraform, Jenkins, AWS EC2, S3, CodeBuild, CodeArtifact, CodeDeploy, CodePipeline, CloudFormation, Bedrock, Docker, Grafana, Prometheus, Loki, Git/GitHub, ELK Stack, Zabbix, AWS Bedrock, Docker, Amazon OpenSearch Serverless, GitHub Actions
- **Programming:** Java, C, Python
- **Databases:** MySQL, PostgreSQL
- **Operating Systems & Networking:** Linux, TCP/IP

EXPERIENCE

L&T Technology Services *Chennai, Tamil Nadu*
Intern June 2024 - July 2024

- Implemented and worked with Docker, MySQL, Linux, Zabbix, ELK Stack (log management), and Grafana for system monitoring and data visualization.
- Built a real-time Grafana dashboard using COVID-19 datasets, integrating MySQL for efficient data retrieval and enabling dynamic monitoring and visualization to improve data-driven decision-making.

Justo Global *Chennai, Tamil Nadu*
Devops Intern March 2026 - Present

PROJECTS

CI/CD Pipeline Development on AWS Github
Designed and automated a CI/CD pipeline for a static website using GitHub, Maven, AWS CodeArtifact, AWS CodeBuild, AWS CodeDeploy, AWS CodePipeline, and AWS CloudFormation (Infrastructure as Code). Streamlined deployment workflows to enhance efficiency, ensure consistent and error-free releases, and minimize manual intervention through automation.

End-to-End Cloud-Native CI/CD Pipeline Github
Designed and implemented an end-to-end CI/CD pipeline using GitHub, Jenkins, Docker, Kubernetes (AWS EKS), and Helm. Automated application deployment through containerized workflows, Kubernetes manifest templating, and Helm chart management. Built a production-ready EKS environment with NGINX Ingress Controller, AWS Load Balancer, Cloudflare DNS routing, and PostgreSQL StatefulSets with persistent storage. Implemented observability using Prometheus, Grafana, and Loki for metrics, monitoring, and centralized logging, enabling scalable cloud-native application delivery.

Jenkins AI RCA Agent Github

Built an AI-powered RCA agent for Jenkins CI/CD pipelines using Python, FastAPI, OpenAI GPT-4o-mini, SQLite, and Docker. Automated build failure analysis, recurring incident detection (SHA-256 fingerprinting), team-based owner routing, and SMTP alerting. Reduced MTTR through AI-generated RCA reports, resolution playbooks, and real-time failure analytics dashboards.

RAG Chatbot using AWS Bedrock GitHub

Built a Retrieval-Augmented Generation (RAG) chatbot to provide context-aware answers from uploaded documents. Integrated Amazon S3 for secure storage, Amazon Bedrock for large-language-model (LLM) orchestration, and Amazon OpenSearch Serverless for high-performance vector search and retrieval. Designed and fine-tuned custom prompts to increase response accuracy and relevance.

AI-Powered Email Reply Chrome Extension GitHub

Developed production-ready infrastructure for FastAPI application with comprehensive CI/CD pipeline using GitHub Actions, implementing automated testing, code quality gates, and security scanning achieving 100% deployment success rate. Built monitoring stack with Prometheus and Grafana tracking 5 performance metrics including response times, cache efficiency, and API success rates, containerized application using Docker for scalable multi-service deployment, and optimized system performance through intelligent caching and reducing response times.

Roads that Honk *Arduino, Ultra Sonic sensor, Wi-Fi module*

Developed a real-time vehicle detection and alert system using Ultrasonic sensors and a Wi-Fi communication module to identify incoming vehicles on hairpin bends. Designed automated road safety alerts with blinking lights and horn activation, improving driver awareness and reducing accident risk.

HACKATHONS

Datasprint 3.0 – 24-Hour Data Analytics Hackathon

- Secured **4th place** among **25 teams** in a 24-hour data-focused hackathon involving real-world data analytics and machine learning challenges.
- Completed **4 competitive rounds**, each requiring data preprocessing in **Power BI**, feature engineering, and end-to-end machine learning model development.
- Engineered meaningful features, trained and evaluated ML models, and optimized solutions under strict time constraints.
- Presented technical solutions to academic and industry evaluators, with assessment based on model performance, innovation, and clarity of explanation.

LEADERSHIP

NextGen Cloud, VIT-AP *Oct 2022 - 2024*

Co-Lead of Tech Days

- Created weekly AI/ML educational content for social media, enhancing community engagement and promoting knowledge sharing among peers.
- Coordinated content planning and social media strategy to improve reach and engagement.

CERTIFICATIONS

- AWS Certified Cloud Practitioner
- Java by Apna College
- Basics of Networking by Cisco
- Responsible and Safe AI by IIT Madras
